Subject: FW: Malibu - SMMUSD/ENVIRON Interior PCB Sample Data Report dated 3/20/2015

FYI - Kara and other coordinators working on PCB issues -

- Additional sampling at Malibu High School was conducted 2/28/15. 24 additional bulk samples were taken and all exceeded 50 ppm – ranged from 330 – 570,000 ppm. The sample report is attached.

Hi Jorine,

Please take a look at Table 3 of the attached ENVIRON Report that shows PCB levels from caulking inside the classrooms at Malibu.

Mark,

FYI – please see Table 3 of the attached ENVIRON Report for PCB data resulting from the bulk window caulk and door samples collected inside the Malibu HS and JCES classrooms by ENVIRON on 2/28/2015. 24 bulk samples were collected and all report PCBs well in excess of 50 ppm (ranging from 330 ppm to 570,000 ppm).

Subject: SMMUSD - ENVIRON Interior PCB Sample Data Report dated 3/20/2015

CY and Wendy,

Please find the attached Environ Report titled “Notification of Additional Locations at MHS and JCES to be Addressed in Accordance with October 2014 USEPA Approved Plan (dated 3/20/2015). Note – this Report was made available the day after ENVIRON presented their costs associated with DTSC’s PEA/RAW, and USEPA’s BMP work to the SMMUSD Board on 3/19/2015.

Table 3 reports the data for the “bulk sampling of interior window and door caulking” collected by ENVIRON on 2/28/2015. The total PCB concentrations in all 24 bulk samples collected by ENVIRON are reported to exceed 50 ppm. The highest detected concentration of PCBs was reported at 570,000 ppm at the JCES (Music Room – Building F).

DTSC was not provided a copy of this Report. The community informed DTSC of the Report, and I located a copy (with difficulty) on the SMMUSD’s website today.
